

## CAREER PROFILE

As a MERN stack Developer, I am a highly adaptable, detail-oriented professional with expertise in project management, effective communication, and problem-solving. I excel at driving business outcomes by aligning resources, planning strategically, and executing priorities with precision.

## PROJECTS

Some of my projects that are public on github.

**Property Recommender** - The Property Recommendation system is based on React, Firebase, and Flask (a Python web framework). It is an recommendation system that recommend user different results over content based search.

**Asaan Movers** - Logistic Application with real-time tracking, build by using React.Js, Express.js, Node.js and MongoDB (MERN Stack).

**connectNbuy** - ConnectNBuy is an e-commerce web app based on MERN Stack, that allow user to buy items and connect with sellers.

**Live-Chat Room** - This web-app was built by using socket.io and express.js for chat-room conservation. When the user is added then the message appears to other room members and also when he/she leave.

**Haytham Academy** - Haytham Academy, a bespoke online teaching website, meticulously crafted using cutting-edge technologies including HTML5, Bootstrap, and Node.js.

**Global-Wild-Swimming-Camping-Site** - Global Wild Swimming & Camping Site is based upon HTML5, CSS, Javascript, PHP and SQL database. It help user to find available pitches and book them after authentication.

**Super Bank** - Super-Bank is an e-commerce website, in this website user can add different items to the cart and checkout the items. Also it shows the sale products into the hotlist items.
